

Quoting

quote

Description: Prevents an atom from being reduced.

Parameters:

- Atom: The atom to be quoted.

Return: The quoted atom (which will not be evaluated).

Example:

```
!(quote (+ 1 2)) ; Returns (+ 1 2) instead of 3
```

unquote

Description: Removes the quote from a quoted atom.

Parameters:

- QuotedAtom: The atom to unquote.

Return: The original, unquoted atom.

Example:

```
!(unquote (quote (+ 1 2))) ; Returns 3
```

noreduce-eq

Description: Checks equality of two atoms without reducing them.

Parameters:

- A: First atom
- B: Second atom

Return: True if not reduced atoms are equal, False - otherwise

Example:

```
!(nreduce-eq (+ 1 2) (+ 1 2)) ; Returns True  
!(nreduce-eq (+ 1 2) 3) ; Returns False
```
